Abgabetermin: 10.12.2019

Name(2): Viktoria Streibl

Punkte:

Übungsgruppe: 1

korrigiert:

Geschätzter Aufwand in Ph: 8 | 4

Effektiver Aufwand in Ph: 6 | 4

Beispiel 1 (24 Punkte) Fahrsimulation: Entwerfen Sie aus der nachfolgenden Spezifikation ein Klassendiagramm, instanzieren Sie dieses und implementieren Sie die Funktionalität entsprechend:

Für einen KFZ-Prüfstand ist eine Software zu entwickeln. Dabei sollen Sensorwerte zur Ermittlung der Raddrehzahlen eingelesen und verarbeitet werden. Die Aufbereitung der Daten umfasst die Berechnung der Momentangeschwindigkeit (Tachometeranzeige) und der zurückgelegten Wegstrecke (Kilometerzähler; grobe Näherung genügt).

Modellieren Sie nun einen PKW als Konkretisierung eines KFZ. Der PKW hat einen Tachometer und einen Kilometerzähler. Weiters verfügt der PKW über einen Raddrehsensor, der bei jedem Abruf die momentane Raddrehzahl eines der vier Räder zurückliefert. Bei jedem Abruf der Raddrehzahl sollen die Anzeigen für den Tachometer und die Kilometeranzeige automatisch aktualisiert werden. Verwenden Sie dazu ein passendes Design Pattern.

Der Raddrehsensor wird hier in der Simulation durch eine Datei nachgebildet. Jede Zeile der Datei entspricht dabei einer momentanen Drehzahl. Kapseln Sie den Sensor in einer Klasse. In der Schnittstelle dieser Klasse befindet sich eine Methode `GetRevolutions()`, die einen Drehzahlwert von der Datei einliest und zurückgibt.

Die Klasse PKW verfügt über eine Methode `Process()`, die vom Testtreiber fix im 500ms- Takt aufgerufen wird. `Process()` liest jedes Mal einen neuen Drehzahlwert via `GetRevolutions()` ein und legt diesen Wert lokal in einem Member ab. Weiters ist eine Methode `GetCurrentSpeed()` vorzusehen, die anhand folgender technischer Daten die Momentangeschwindigkeit ermittelt:

Einheit der Raddrehzahl: U/min

Raddurchmesser: 600mm

Das Fahrzeug verfügt über ABS und ASR (keine groben Schlupfwerte). Ermitteln Sie die Momentangeschwindigkeit entweder in m/s oder km/h.

Bsp: 500 U/min

$$v = (500 / 60) \times 0,6\text{m} \times \text{PI} \times 3,6 = 56,549 \text{ km/h}$$

Die Tachometer- und Kilometeranzeige holen sich im Zuge einer Benachrichtigung den aktuellen Geschwindigkeitswert. Die Kilometeranzeige berechnet auf Basis des 500ms-Taktes die gefahrene Wegstrecke:

$$(56,549 / 3,6) / 2 = 7,854\text{m (grobe Näherung)}$$

Simulieren Sie den Tachometer mit Hilfe der analogen Anzeige (AnalogDisplay) und die Kilometeranzeige mit Hilfe der digitalen Anzeige (DigitalDisplay).

Schreiben Sie einen Testtreiber, der wiederholt im 500ms-Takt die Methode `Process()` vom PKW aufruft.

Die Displays müssen nicht mitabgegeben werden. Die mitgelieferten Klassen für die Ansteuerung der Displays sind elektronisch mitabzugeben, allerdings kann auf einen Ausdruck im pdf verzichtet werden!

Treffen Sie für alle unzureichenden Angaben sinnvolle Annahmen und begründen Sie diese. Verfassen Sie weiters eine Systemdokumentation (Funktionalität, Klassendiagramm, Schnittstellen der beteiligten Klassen, etc.)!

Allgemeine Hinweise: Legen Sie bei der Erstellung Ihrer Übung großen Wert auf eine **saubere Strukturierung** und auf eine **sorgfältige Ausarbeitung**! Dokumentieren Sie alle Schnittstellen und versehen Sie Ihre Algorithmen an entscheidenden Stellen ausführlich mit Kommentaren! Testen Sie ihre Implementierungen ausführlich! Geben Sie den **Testoutput** mit ab!

SDP - Exercise 05

winter semester 2019/20

Viktoria Streibl - S1810306013

1 Organizational

1.1 Team

- Viktoria Streibl - S1810306013
- Daniel Weyrer - S1820306044

1.2 Roles and responsibilities

1.2.1 Jointly

- Planning
- Documentation
- Systemdocumentation
- Class Diagram

1.2.2 Viktoria Streibl

- Class IDisplay
Class Speed
- Testdriver

1.2.3 Daniel Weyrer

- Class Vehicle
Class Car
Class RPMSensor
- Class Distance

1.3 Effort

1.3.1 Viktoria Streibl

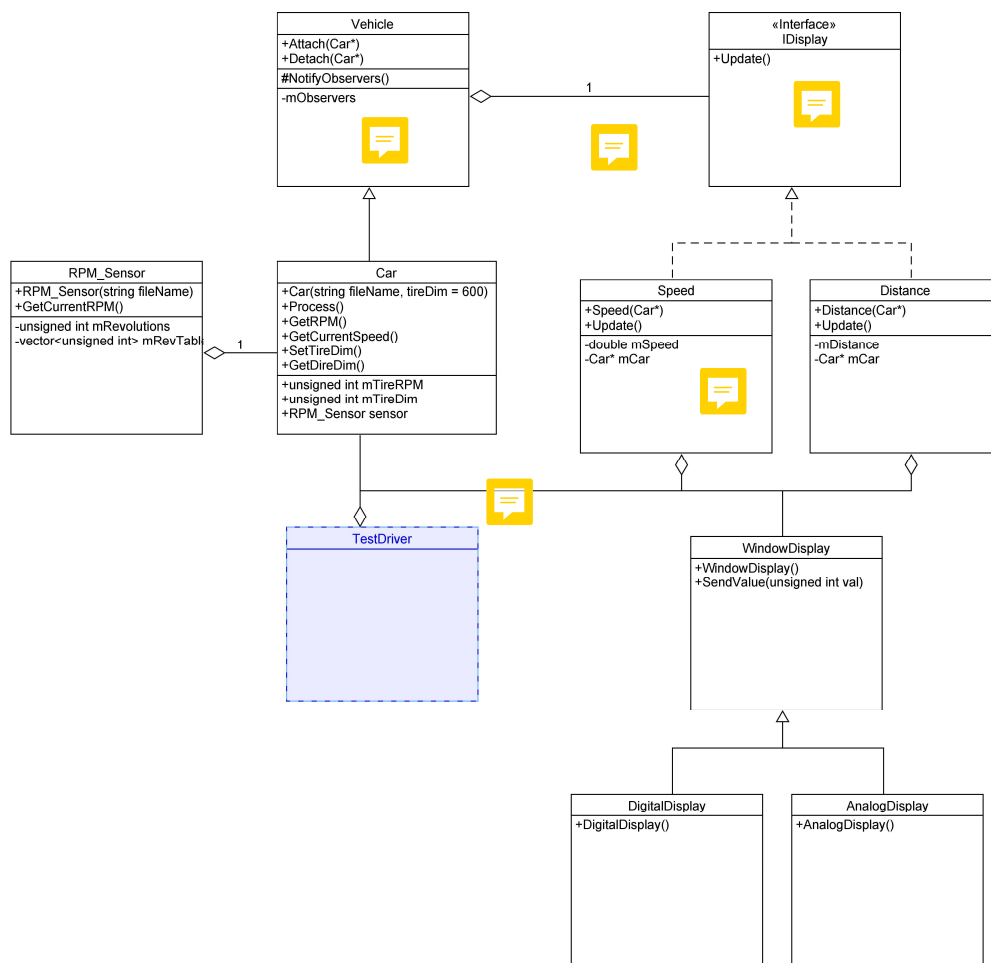

- estimated: 6 ph
- actually: 4 ph

1.3.2 Daniel Weyrer

- estimated: 8 ph
- actually: 5 ph

2 System Design

2.1 Classdiagram

2.2 Design Decisions

2.2.1 FileName in Constructor for Car

As the Sensor is only simulated and useless without a fileName, we decided to store the fileName in the car class.

2.2.2 ReadFile

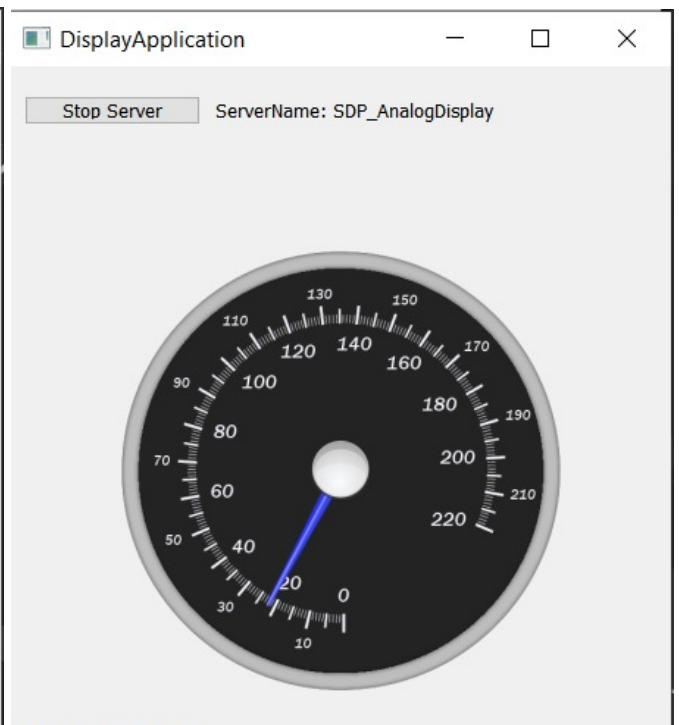

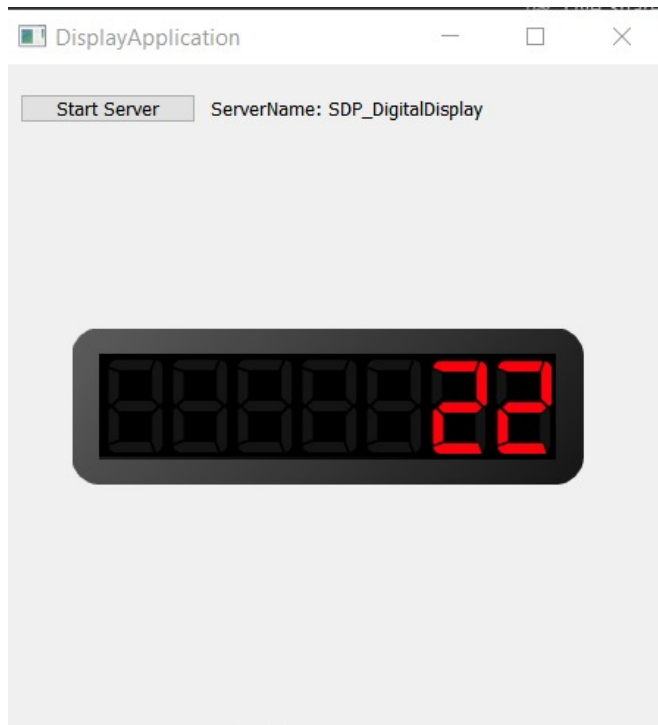

ReadFile uses the static filename given in the header to read the content to the container.

3 Test Protocol

3.1 Testfiles

3.1.1 output.txt

5 Methoddescriptions

Chapter 3

Class Documentation

3.1 AnalogDisplay Class Reference

Inherits [WindowsDisplay](#).

Additional Inherited Members

The documentation for this class was generated from the following file:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/WindowsDisplay.h

3.2 Car Class Reference

Inherits [Vehicle](#).

Public Types

- using **SPter** = std::shared_ptr< [Car](#) >

Public Member Functions

- [Car](#) (double tireDim=0.6)
Constructor, saves the fileName into member and initializes tireDimension and current RPMs.
- void [Process](#) ()
Calls GetRevolutions of [RPM_Sensor](#) and stores delivered value in membervariable, starts Notificationprocess.
- unsigned int [GetRPM](#) () const
Getter.
- double [GetCurrentSpeed](#) () const
Calculates current speed based on Wheel diameter and RPMs.
- void [SetTireDim](#) (double newDim)
Replaces old value for Tire Dimension with the given Diameter.
- double [GetTireDim](#) () const
Getter.

Additional Inherited Members

3.2.1 Constructor & Destructor Documentation

3.2.1.1 Car()

```
Car::Car (
    double tireDim = 0.6 ) [inline]
```

Constructor, saves the fileName into member and initializes tireDimension and current RPMs.

Parameters

-	
---	--

Returns

-

3.2.2 Member Function Documentation

3.2.2.1 GetCurrentSpeed()

```
double Car::GetCurrentSpeed ( ) const
```

Calculates current speed based on Wheel diameter and RPMs.

Parameters

-	
---	--

Returns

current [Speed](#)

3.2.2.2 GetRPM()

```
unsigned int Car::GetRPM ( ) const
```

Getter.

Parameters

-	
---	--

Returns

current Rotations per Minute for one Wheel

3.2.2.3 GetTireDim()

```
double Car::GetTireDim ( ) const
```

Getter.

Parameters

-	
---	--

Returns

current Tire Diameter

3.2.2.4 Process()

```
void Car::Process ( )
```

Calls GetRevolutions of [RPM_Sensor](#) and stores delivered value in membervariable, starts Notificationprocess.

Parameters

-	
---	--

Returns

-

3.2.2.5 SetTireDim()

```
void Car::SetTireDim (
    double newDim )
```

Replaces old value for Tire Dimension with the given Diameter.

Parameters

<i>newDim</i>	new Dimension for Tire Diameter
---------------	---------------------------------

Returns

-

The documentation for this class was generated from the following files:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Car.h
- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Car.cpp

3.3 DataPacket Struct Reference

Public Attributes

- eCommand **command**
- unsigned int **value**

The documentation for this struct was generated from the following file:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/WindowsDisplay.h

3.4 DigitalDisplay Class Reference

Inherits [WindowsDisplay](#).

Additional Inherited Members

The documentation for this class was generated from the following file:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/WindowsDisplay.h

3.5 Distance Class Reference

Inherits [IDisplay](#).

Public Member Functions

- [Distance](#) (Car::SPter const &car)
constructor for concrete observer [Distance](#); initializes Shared-Pointer and [Distance](#)
- virtual void [Update](#) () override
requests current revolutions, calculates distance travelled and saves it into member

Additional Inherited Members

3.5.1 Constructor & Destructor Documentation

3.5.1.1 Distance()

```
Distance::Distance (
    Car::SPter const & car ) [inline]
```

constructor for concrete observer [Distance](#); initializes Shared-Pointer and [Distance](#)

Parameters

<i>shared</i>	pointer to a car
---------------	------------------

Returns

3.5.2 Member Function Documentation

3.5.2.1 Update()

```
void Distance::Update ( ) [override], [virtual]
```

requests current revolutions, calculates distance travelled and saves it into member

Parameters

-	
---	--

Returns

-

Implements [IDisplay](#).

The documentation for this class was generated from the following files:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Distance.h
- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Distance.cpp

3.6 IDisplay Class Reference

Inherited by [Distance](#), and [Speed](#).

Public Types

- using **SPter** = std::shared_ptr< [IDisplay](#) >

Public Member Functions

- virtual void [Update](#) ()=0
pure virtual Function, ready to be implemented in an concrete observer

Public Attributes

- WindowsDisplay::SPter **anaDisp** = std::make_shared<[AnalogDisplay](#)>()
- WindowsDisplay::SPter **digDisp** = std::make_shared<[DigitalDisplay](#)>()

3.6.1 Member Function Documentation

3.6.1.1 Update()

```
virtual void IDisplay::Update ( ) [pure virtual]
```

pure virtual Function, ready to be implemented in an concrete observer

Parameters

-	
---	--

Returns

-

Implemented in [Distance](#), and [Speed](#).

The documentation for this class was generated from the following file:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/IDisplay.h

3.7 Object Class Reference

Inherited by [RPM_Sensor](#), [Vehicle](#), and [WindowsDisplay](#).

The documentation for this class was generated from the following file:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Object.h

3.8 RPM_Sensor Class Reference

Inherits [Object](#).

Public Member Functions

- unsigned int [GetRevolutions](#) ()
Getter.

3.8.1 Member Function Documentation

3.8.1.1 GetRevolutions()

```
unsigned int RPM_Sensor::GetRevolutions ( )
```

Getter.

Parameters

--	--

The documentation for this class was generated from the following files:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/RPMSensor.h
- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/RPMSensor.cpp

3.9 Speed Class Reference

Inherits [IDisplay](#).

Public Member Functions

- [Speed](#) (Car::SPter const &car)
constructor for Speed-Observer
- virtual void [Update](#) () override
gets current speed of the [Car](#) pointed to

Additional Inherited Members

3.9.1 Constructor & Destructor Documentation

3.9.1.1 Speed()

```
Speed::Speed (  
    Car::SPter const & car ) [inline]
```

constructor for Speed-Observer

Parameters

<i>Shared-Pointer</i>	to a Car
-----------------------	--------------------------

Returns

-

3.9.2 Member Function Documentation

3.9.2.1 Update()

```
void Speed::Update ( ) [override], [virtual]
```

gets current speed of the [Car](#) pointed to

Parameters

-	
---	--

Returns

-

Implements [IDisplay](#).

The documentation for this class was generated from the following files:

- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Speed.h
- C:/Users/Daniel/OneDrive-students.fh-hagenberg.at/SS19/OneDrive - students.fh-hagenberg.at/FH/Sem 3 - 19_20/SDP3/UE/Git_Work/Exersice5/DrivingSimulation/DrivingSimulation/Speed.cpp

3.10 Vehicle Class Reference

Inherits [Object](#).

Inherited by [Car](#).

Public Member Functions

- void [Attach](#) (IDisplay::SPter const &obs)
Adds given shared_ptr to observer container.
- void [Detach](#) (IDisplay::SPter const &obs)
Removes given observer-ptr from container if it's contained.

Protected Member Functions

- void [NotifyObservers](#) ()
iterates through vector of Observers and calls Update() on every observer

3.10.1 Member Function Documentation

3.10.1.1 Attach()

```
void Vehicle::Attach (  
    IDisplay::SPter const & obs )
```

Adds given shared_ptr to observer container.

Parameters

obs	shared pointer of type IDisplay , which will be added to the container
-----	--
